

Modern Fan Company Controls

Modern Fan Company ceiling fans do not use conventional pull chains (with the exception of the Industry model). When ordering your fan, you should have selected the control(s) that was most appropriate for your fan(s) and electrical requirements. All controls (except the #009A and #009B) are designed for use with one fan only

Control options are as follows:

#001 Fan Speed Control

A basic fan control used to operate a fan only, providing four speeds.

#002 Three Wire Fan Speed and Light Control

Intended for operation of a fan with light, providing four speeds and full range dimming (except fluorescent lights). Requires two circuits (three wires).

#003 Handheld Remote Control

Designed for independent operation of a fan and light using only one circuit (two wires). Provides three speeds and full range dimming (except fluorescent lights) and comes with a wall hanging bracket.

#004 Wall Mounted Remote Control

Designed for independent operation of a fan and light using only one circuit (two wires). Provides three speeds and full range dimming (except fluorescent lights) and wires into wall box.

#009 Multi-Fan Speed Control

A three speed fan control designed to control two fans (#009A) or three to five fans (#009B) on a single circuit. Separate control of lights should be planned for if this control is to be used for fans with lights.

Special Note:

Any fan that uses a **fluorescent lamp** may not be dimmed or operated with a dimming control. Non-dimming versions of our controls are available for use with the Aurora, Aurora Hugger, or any other model using a fluorescent lamp. Non dimming controls are designated by the suffix "ND".
